

KLEAN/pak™

As the world transitions to being open for business again, everyone is asking, “How do we open safely?”

Task Force Tips has a tool to help. For over 50 years, TFT has been manufacturing equipment to help save lives and protect property. The new, patent pending, TFT KLEAN/pak mass disinfection system continues that legacy of protection.

The KLEAN/pak allows municipal, commercial, and industrial users to safely, effectively, and quickly disinfect areas by simply adding garden hoses, water and one of the dilutable liquid disinfectants shown on EPA's List N of products for emerging viruses like COVID-19, MERS, and SARS.

The KLEAN/pak is made in the USA by a global leader in public safety water flow products. It is factory calibrated and has an adjustable metering valve that helps you ensure that the disinfectant concentration is safe and effective.

Clean from 1,000 to 300,000 square feet between refills. KLEAN/pak helps businesses, parks, industrial facilities and schools stay safe.

KLEAN/pak™

A complete portable disinfecting system that's designed to help businesses and institutions *OPEN SAFELY* and continue to disinfectant everyday thereafter.

KLEAN/pak connects to garden hoses and is approved for spraying any dilutable liquid EPA List N disinfectant.

The system is calibrated before shipping and has an easy adjustment setting to ensure the precise amount of disinfectant is applied every time based upon manufacturers' unique settings.

KLEAN/pak can deliver disinfecting solution for up to 5 continuous hours with just plain tap water.

Typical sprayers allow only minutes worth of spray time before having to refill. Bottle and hand pump or garden type sprayers require constant physical energy to pressurize between sprays. Other sprayers require power supplies, compressed air tanks, and restrictive personal protective equipment beyond just safety glasses and gloves.

KLEAN/pak can disinfect up to 300,000 square feet between refills.

Other sprayers cover tiny areas and require more filling and physical effort for coverage. TFT's KLEAN/pak is designed to disinfect large common areas FAST... from 10,000 to 300,000 square feet between pail refills!

KLEAN/pak produces large droplets that provide better coverage and protection.

More disinfecting solutions makes it onto the items being cleaned. In addition, other sprayers can produce fine mists that cause blow-back on the operator and can carry through the air affecting customers or equipment.

SPECIFICATIONS

Rated Flow	2.0 US gpm @ 70 psi (7.6 l/min @ 4.8 bar)
Pressure Range	30 – 300 psi (2 – 20 bar)
Holding Tank Capacity	5 gallon (20 l)
Metering Range	Zero to 9 US ounces/gallon
Inlet	Standard Garden Hose Thread International Thread Adapters Available
Outlet	Standard Garden Hose Thread International Thread Adapters Available
Nozzle	Low Pressure Flat Fan Spray
Spray Coverage	4 ft x 4 ft (1.2 m x 1.2 m)
Wand Included	1.5 ft Extendable to 3 ft
Nozzle Wand Adapter	Standard Extension Pole Thread
Disinfecting Solutions	For Use with Non-alcohol Based Disinfectants
Calibration Viscosity	1.00 CPS (Same as Water)
Requires two 50 ft (user supplied) 5/8 inch standard garden hoses.	

APPLICATIONS

Businesses

Outdoor Restaurant Seating
